Wilo presents intelligent solutions for water management

The technology company Wilo presents products, systems and solutions for water and sewage management at the IFAT 2022.

Dortmund/Munich. From 30 May to 3 June, experts in water, sewage, waste and raw materials management are convening again at the world's leading trade fair IFAT in Munich. The Wilo Group is among the more than 3,100 exhibitors. At the main booth covering 390 square metres, the product and industry experts are presenting technological solutions for the challenges involved in treating and transporting water and sewage.

Global trends such as climate change, water shortages and increasing urbanisation continue to pose great challenges for the industry: Water supply and disposal have to be ensured in increasingly large urban and agricultural areas around the world. It is not only the number of applications in municipal waterworks and wastewater treatment plants or in flood control that is constantly on the rise. Their performance requirements and complexity are also increasing.

Connected solutions have never been more important

Reliable and intelligent connected solutions are becoming increasingly important to meet these challenges. As an international technology provider and digital pioneer in the industry, Wilo is presenting these solutions in Munich. After the trade fair was cancelled the year before last as a result of the pandemic, the company is back again. And this time, it has two booths. Back in spring 2021, Wilo took over the Berlin-based Abionik Group, thus expanding its expertise as a solutions provider in clean water treatment.

"With the acquisition of the Abionik Group, we have diversified our portfolio in the market segment of water management in a targeted manner", explains Oliver

Hermes, President & CEO of the Wilo Group. Daniel Crawford, CEO of the Abionik Group adds: "Abionik's products and services are designed to sustainably reduce resource and energy consumption, pollutants and other contaminants in water management. Wilo and Abionik thus complement each other perfectly, together creating new solutions for users."

The solutions that Wilo and Abionik are presenting at the IFAT include the intelligent system solution for smart sewage pumping stations, Wilo-Rexa SOLID-Q, the particularly efficient submersible pump Wilo-Actun ZETOS for process water and water supply from boreholes and water reservoirs in municipal and industrial applications as well as the two- or three-blade submersible mixer Wilo-EMU TRE for reliable biological wastewater treatment. A membrane filter module from Abionik as well as the water backpack PAUL for mobile water purification are also on display at the Wilo booth.

The Wilo Group is further focusing on its digital applications and services, such as the digital system landscape Wilo-World, the application-independent advice and chat function Wilo-Live Assistant and the service package WiloCare, which combines various maintenance services with digital remote access to the installed product solutions, thus guaranteeing operational reliability during the entire product life cycle.

The Wilo Group's main booth can be found in Hall B1, booth 251/350. The Abionik Group is presenting its product and solutions expertise in Hall A2, booth 127/226.
