New Plug & Pump solution: Wilo introduces custom pre-assembled manifolds

Significant time and cost savings for efficient plant engineering

Dortmund/Frankfurt. Wilo, the premium pump and pump system supplier, is expanding its portfolio with innovative pre-assembled manifolds. These manifolds are specifically designed to meet the requirements of installers, building operators, and consultants in plant engineering, offering a smart Plug & Pump solution with added value. By delivering custom pre-assembled systems directly to construction sites, professional installers save time-consuming deliveries of individual components and often several days of assembly work. These custom pre-assembled systems ensure significant time savings and clear cost calculations. With the new pre-assembled manifolds, Wilo is responding to the increasing demand for pre-configured pipe groups and distributors in commercial buildings and industries.

There is a clear trend towards pre-configured pipe groups and manifolds in plant engineering. This trend is driven by the growing shortage of skilled workers in the trades and increasing time pressure on construction sites. This is where Wilo's pre-assembled manifolds come in: they allow experts in the construction and building services sectors to find more time for other projects and tasks while Wilo handles the design and manufacturing. With comprehensive documentation, the pre-assembled manifold can be seamlessly integrated into the overall system, ensuring smooth on-site implementation.

Industrially pre-assembled manifolds offer significant time savings compared to on-site assembly. Installers benefit from shorter assembly times, allowing them to focus on other installation tasks. Moreover, Wilo provides guaranteed pricing for the configured solution up to the point of delivery, removing the need for recalculations and ensuring complete cost control for the project.

Press release

Tailor-made solutions and reliable quality

Wilo's pre-assembled manifolds are configured and manufactured individually and flexibly according to customer requirements. Wilo coordinates all processes with the customer – from dimensioning and design to the creation of technical drawings and delivery. Industrial production in a specialised production site under standardised conditions guarantees consistently high quality, which is typically higher than systems assembled on-site. This increases the reliability and a long service life of the manifold.

"At a time where there is a shortage of skilled workers Wilo's pre-assembled distributors offer a solution that saves time and reduces costs. That's how we create significant added value for installers, building operators, and consultants," explains Kai Karwath, Key Account Manager at Wilo Germany.

About Wilo:

The Wilo Group is one of the world's leading premium suppliers of pumps and pump systems for building services, water management and the industrial sector. In the last decade, we have evolved from a hidden to a visible and connected champion. Wilo employs around 9,000 people around the globe today. With innovative solutions, smart products and individual services, we provide the intelligent, efficient and environmentally friendly service of keeping water flowing. We already are the digital pioneer within the industry with our products and solutions, processes and business models.
